You may suffer from the diseases listed below

No	Disease Name	Treatment advice
1	Malaria	Malaria is an acute and chronic infectious disease caused by Plasmodium parasites that attack erythrocytes and is characterized by the discovery of an asexual form in the blood with symptoms of fever, chills, anemia and enlarged spleen.
2	Dengue Hemorrhagic Fever	Dengue Hemorrhagic Fever (DHF) is an infectious disease caused by the dengue virus. Mosquitoes or/some types of mosquitoes transmit (or spread) the dengue virus. Dengue fever is also known as "breakbone fever" or "bonebreak fever", because this fever can cause sufferers to experience severe pain as if their bone is broken.
3	Malaria	Malaria is an acute and chronic infectious disease caused by Plasmodium parasites that attack erythrocytes and is characterized by the discovery of an asexual form in the blood with symptoms of fever, chills, anemia and enlarged spleen.
4	Dengue Hemorrhagic Fever	Dengue Hemorrhagic Fever (DHF) is an infectious disease caused by the dengue virus. Mosquitoes or/some types of mosquitoes transmit (or spread) the dengue virus. Dengue fever is also known as "breakbone fever" or "bonebreak fever", because this fever can cause sufferers to experience severe pain as if their bone is broken.
5	Hepatitis B	Hepatitis B is a virus that attacks the liver, enters through the blood or body fluids of an infected person. This virus is widespread throughout the world with different incidence rates. The prevalence rate of Hepatitis B in Indonesia varies widely, ranging from 2.5% in Banjarmasin to 25.61% in Kupang, so it is included in the group of countries with moderate to high endemicity.
6	Vertigo	Vertigo is the wrong perception of a person's movement or the environment around them. Vertigo is a disease with various causes including: due to accidents, stress, disorders of the inner ear, drugs, too little or too much blood flow to the brain, and others.
